---

EzFlow site is one of the three options available to choose from when installing an ezpublish site. This is part of the installation process. The ezflow site allows administrator to create a content type called front page where they can stack boxes of contents of their choice for display.

If you are residing behind a firewall or proxy server when doing an installation of the ezpublish you might encounter problems downloading these packages directly from the central ez.no server. If such is the case you can download them below:

- [ezflow\\_classes.ezpkg](#)
- [ezflow\\_democontent.ezpkg](#)
- [ezflow\\_design.ezpkg](#)
- [ezflow\\_extension.ezpkg](#)
- [ezflow\\_site.ezpkg](#)
- [ezwebin\\_extension.ezpkg](#)
