

Response to : Trouble in displaying the Special Block in Ezpublish 4.0.1

This is question posed to me by a fellow developer which I thought I should highlight to the rest of us developing EzPublish.

I try to create a Special Block in Ezpublish 4.0.1. I have followed according to the steps have been mentioned in your site.

But When i try to create a event calendar block and try to display an event calendar but it shows like this...

Block: EventCalendar (Manual)
Annual Day Event Calendar..

instead of showing the calendar it shows only the block name and event name. What I have to do? I would like to show the event calendar on the front page itself.

Thanking you
Thiruarasu

Base on what I have read, the block.ini entry has been entered correctly. I think what is missing in this instance is the fact that the **override.ini.append.php** was not updated properly.

The **override.ini.append.php** file can be found in one of the sub directories under the location **settings > siteaccess >**

If you are using the default installation try inserting the following entry into the

- **settings > siteaccess > eng > override.ini.append.php**
- **settings > siteaccess > ezflow_site_admin > override.ini.append.php**

You will need to map the block type and view correctly to the template

[ListRssAvailable]

Source=block/view/view.tpl

MatchFile=block/**site_rss_feeds**.tpl

Subdir=templates

Match[type]=**ListRssAvailable**

Match[view]=**site_rss_feeds**

Highlighted in bold of the above is what you will need to change. Perhaps you might want to tell me what entry you did in the **block.ini** file at location **extension > ezflow > settings > settings > block.ini.append.php** ?

In that way I can help you even better.
